SRINIVAS GURUPRASAD

ENGINEERING MANAGER | DISTRIBUTED SYSTEMS | CLOUD INFRASTRUCTURE | AI/ML/RAG PLATFORMS

Seattle, WA | +1 617-659-2583 | srgurupr@outlook.com | linkedin.com/in/gforguru | Green Card

EXECUTIVE SUMMARY

Engineering leader with 17+ years of experience building and scaling distributed systems, cloud platforms, data/AI platforms, and developer infrastructure across AWS, Microsoft, Google, and Intel. Currently lead a 20-engineer Amazon S3 Object Write team responsible for core write-path APIs at exabyte scale. Experienced in multi-year platform rearchitecture, technical strategy, architecture reviews, operational excellence, security, and cross-functional execution. M.S. in Artificial Intelligence from Georgia Tech.

SELECTED IMPACT

- 50%+ throughput improvement and $331M projected infrastructure cost savings over five years through S3 platform rearchitecture.
- Lead 20 engineers operating Amazon S3 write-path APIs processing billions of daily requests at exabyte scale across AWS regions.
- Reduced Microsoft Data Product platform onboarding from 15 days to 30 minutes for 15 internal and 10 external customers.
- Enabled 4.2M developers to access Google Cloud products programmatically through cloud client libraries and Spring Cloud GCP.
- Led teams of up to 30 engineers, interns, program managers, and product analysts across technology transformation and supply-chain functions.
- $1M annual savings through automation of localization quality-control work at Intel.

PROFESSIONAL EXPERIENCE

Engineering Manager | AWS – S3 Object Storage *Nov 2025 – Present | Seattle, WA*

- Lead a 11-member S3 Object Write team owning core write-path APIs including PUT, DELETE, Multipart Upload, Copy, and POST for Amazon S3.
- Drive a multi-year platform rearchitecture delivering 50%+ throughput improvement and $331M in projected infrastructure cost savings over five years.
- Own end-to-end operational excellence for S3's write path, maintaining availability and latency SLAs for APIs processing billions of daily requests at exabyte scale across AWS regions.
- Lead security and durability initiatives addressing parameter-handling vulnerabilities across authentication, authorization, and business-logic layers.
- Manage 24/7 on-call operations, hiring, performance coaching, and team development for a high-traffic AWS service plane.

Associate Director | Wayfair *Oct 2023 – Nov 2025 | Boston, MA*

- Implemented Workday Position Management with a 20-engineer team, reducing reorganization execution time from 4 weeks to 1 day; achieved 100% job-profile compliance and 90% geo-differentiated profile accuracy.
- Reduced escalation requests by 90% and voluntary resignation processing time by 95%; published a 3P Workday file integration/validation framework that reduced integration errors by 80%.
- Led a 30-person organization spanning engineers, interns, program managers, and product analysts across Post Order Customer/Supplier Service, Tech Transformation, and Innovation.
- Delivered Phase 1 of a GenAI chatbot targeting at least 70% self-service resolution for initial queries.
- Formulated long-term objectives, key results, and annual roadmaps while managing concurrent customer, supplier, transformation, and innovation initiatives.

Engineering Manager | Google IT Services *Apr 2022 – Oct 2023 | Bangalore, India*

- Managed a 6-engineer Cloud SDK organization delivering Google Cloud client libraries in .NET, Java, and Python for Spanner, BigQuery, Datastore, Firestore, Pub/Sub, GCS, JDBC, and Spring Cloud GCP.
- Formulated long-term strategy and annual roadmap for the Cloud SDK organization.
- Improved CSAT by 10% by enabling 4.2M developers to access GCP products programmatically through a Spring Cloud GCP ORM layer on top of client libraries.
- Improved NPS by 5 points for 20 enterprise customers; helped reduce time-to-market from 8 months to 1 month and MTTR from 2 weeks to under 1 hour.
- Coordinated Developer Relations, Engineering, Developer Advocacy, and Product teams; managed architecture integration and directed design, code, and deployment reviews.

Engineering Manager | Amazon *Oct 2021 – Mar 2022 | Redmond, WA*

- Managed a 15-engineer team delivering complex Data Analytics projects on time and within budget.
- Enabled 50 enterprise customers to self-serve data needs and supported data-driven improvements to customer acquisition and marketing communications.
- Led engineering execution, stakeholder alignment, project planning, performance management, and issue resolution.

Engineering Manager | Microsoft *Jan 2013 – Sep 2021 | Redmond, WA*

- Managed 15 Data/Software Engineers, 4 Data Scientists, and 1 Product Owner delivering complex engineering projects.

- Envisioned and built a Data Product DevOps Platform automating the DevSecOps lifecycle for AI/ML models, Azure Data Lake datasets, Power BI reports, Tabular Models, and SSRS reports.
- Enabled Data Engineers, Analysts, and Scientists to operationalize Data Products without Software Engineer support, including data quality/feasibility analysis, ML/AI model templates, test automation, security/telemetry code generation, build/deployment automation, runtime quality insights, governance, compliance, lineage, and fragmentation detection.
- Reduced Data Product onboarding from 15 days to 30 minutes for 15 internal and 10 external customers.
- Coordinated cross-functional teams across Microsoft organizations to align technical execution with business objectives and product launch plans.

Technical Architect | Intel India Technology Pvt Ltd *Dec 2007 – Oct 2012 | Bangalore, India*

- Formulated and implemented strategies for the Intel Software Partner Program and Intel Atom Developer Program.
- Designed reusable quality-control automation that saved $1M over one year and reduced localization turnaround time.
- Led technical talks and design sessions that improved collective ownership of project tasks by 100% and reduced defect/showstopper rates.
- Recognized as an Agile Practice Expert and chief influencer for Agile adoption across projects; mentored developers and contributed to technology POCs and innovation programs.

PERSONAL LEARNING: GENERATIVE AI & RAG PROJECTS

Knowledge Intelligent System | Retrieval Augmented Generation (RAG)

Architecture & technical deep dive: Medium article | GitHub repository

- Designed a RAG-based knowledge system concept for conversational querying of domain documents, grounding LLM responses in retrieved context.
- Defined an end-to-end architecture covering document ingestion, parsing, configurable chunking, embeddings, vector retrieval, and context-aware answer generation.
- Specified source attribution, workspace/document management, indexing controls, and query monitoring; considered scalability, provider flexibility, API security, and hallucination mitigation.

ARCHITECTURE & TECHNICAL LEADERSHIP

Distributed Systems • Cloud Infrastructure • Platform Architecture • Technical Strategy • DevSecOps • AI/ML Platforms • Data Platforms • Developer Platforms • Reliability & Operational Excellence • Security • Architecture & Design Reviews • Cross-Functional Leadership

EDUCATION

- M.S., Artificial Intelligence — Georgia Institute of Technology, Atlanta, GA
- M.Tech., Computer Science — SJC College of Engineering, Mysore
- B.E., Electronics & Communication — SJC Institute of Technology, Bangalore

INNOVATION & PATENTS

- Board2Code — USPTO-approved patent (Application 15/079249) for converting architectural diagrams/designs into structured, compilable code and recommending cloud features, patterns, and best practices. Winner of Microsoft //oneweek hackathon 2015 in three categories.
- AzureCompilerFacile — Design and coding companion for Azure SDK features, cloud/design patterns, coding standards, and automated code fixes. Winner of Microsoft //oneweek hackathon 2014 at India level.

TECHNOLOGY

Cloud: AWS, Azure, GCP, S3, DynamoDB, Redshift, EMR, Glue, EventBridge, Fargate, BigQuery, Datastore, Cosmos DB, Azure Service Fabric
AI/ML: Vertex AI, Gemini, PaLM, OpenAI GPT models, DeepSpeed, LangChain, LangSmith, LangGraph, RAG
Languages/Frameworks: Python, Java, .NET, Java 17, Spring Boot, Spring Data, ASP.NET Core, gRPC, REST

SELECTED TECHNICAL WRITING

Medium:

1. RAG, LangChain, LangGraph & LangSmith
2. Native Image Support in Spring Cloud GCP
3. Google Cloud Library Authentication & Authorization
4. Java Collections Overview in One Diagram
